Written Testimony of Danielle Pimentel, J.D.
Policy Counsel, Americans United for Life
In Support of House Bill No. 5047
Submitted to the House Committee on the Judiciary
March 6, 2023

Dear Chair Craven, Vice-Chair Hagan McEntee, Vice-Chair Knight, and Members of the Committee:

My Name is Danielle Pimentel, and I serve as Policy Counsel at Americans United for Life (“AUL”). Established in 1971, AUL is a national law and policy nonprofit organization with a specialization in abortion, end-of-life issues, and bioethics law. AUL publishes pro-life model legislation and policy guides on end-of-life issues,¹ tracks state bioethics legislation,² and regularly testifies on pro-life legislation in Congress and the states. Our vision at AUL is to strive for a world where everyone is welcomed in life and protected in law. As Policy Counsel, I specialize in life-related legislation, constitutional law, and abortion jurisprudence.

Thank you for the opportunity to provide written testimony in support of House Bill No. 5047, the Born-Alive Infant Protection Act (“H 5047” or “bill”). The bill establishes legal protections for infants born alive during an attempted abortion. I have thoroughly examined H 5047, and I urge the Committee to support this bill because (1) Rhode Island has a legitimate interest to protect human life; (2) the bill will increase the survival rates and provision of comfort care to born-alive infants; and (3) the bill is a critical supplement to federal protections for born-alive infants.

I. Rhode Island Has Robust Powers to Protect Infant Survivors of Botched Abortions Through H 5047

In Dobbs v. Jackson Women’s Health Organization, the Supreme Court overruled Roe v. Wade and Planned Parenthood of Southeastern Pennsylvania v. Casey³ and held that “States may regulate abortion for legitimate reasons, and when such regulations are challenged under the Constitution, courts cannot ‘substitute their social and economic beliefs for the judgment of legislative bodies.’”⁴ A State’s

⁴ Id. at 2283–2284 (citations omitted).
legitimate interests include “respect for and preservation of prenatal life at all stages of development . . . [and] the preservation of the integrity of the medical profession.”

Accordingly, Rhode Island has robust powers to pass protections for infants who survive an abortion procedure. This bill would allow Rhode Island to further its legitimate interest in protecting human life by providing greater protection for newborns than what is currently offered in Rhode Island, as well as the federal Born-Alive Infant Protection Act (‘BAIPA’).

II. Medical Intervention Is Critical to Increasing the Survival Rates and Alleviating the Suffering of Born-Alive Infant Survivors

a. This Bill Ensures that Born-Alive Infants Are Treated with Human Dignity and Given Appropriate Medical Care

As advancements in medical technology progress, medical professionals have been able to save prematurely born children at younger gestational ages. Now, preborn children as young as 21 weeks’ gestation have been able to survive outside the womb. Furthermore, “[r]ecent studies reveal that, with active treatment, infants born at 22 weeks’ gestation can achieve survival rates of 25% to 50%.” Medical pioneering teams are working to increase the survival rates for extremely premature babies. However, “[a] periviable infant (variously interpreted in the United States as one between 20 and 24 weeks gestational age) is a critically ill patient due to developmental immaturity.” Consequently, periviable infants need critical medical care, such as “goal-oriented intensive care including resuscitation and invasive interventions or . . . comfort-oriented end of life care such as warming, morphine for air hunger, and feeding if applicable.”

Periviable infants that are born alive during attempted abortions deserve legal protection, especially when there are as many as 10,000 abortions in the United States that occur at or after 21 weeks’ gestation. It is a common misconception that

most late-term abortions are performed only for reasons of medical necessity. Instead, women often choose abortion because they believe “that childbearing would interfere with their education, work, and ability to care for existing dependents; [the child] would be a financial burden; and would disrupt partner relationships.” As a result, most abortions occur for the mother’s elective reasons, not because of the baby’s medical condition.

Regardless of a woman’s reasons for choosing to abort her baby, born-alive infant survivors should be treated with human dignity and given comfort care, which they would receive under this bill. As the American Association of Pro-Life Obstetricians & Gynecologists recognizes, “[a] preivable infant born alive (variously interpreted as a fetus delivered before 20 to 24 weeks, with those before 20 weeks being termed abortus or miscarriage in medical literature) is a patient at the end of his or her natural life.” Medical professionals can provide perinatal palliative care to these young patients, which “focus[es] on maximizing quality of life and comfort for newborns with a variety of conditions considered to be life-limiting in early infancy,” which “includes lethal fetal conditions” such as extremely premature delivery after a botched abortion. Perinatal palliative care plans “must include plans for assessment and care of the newborn and should include considerations such as newborn bonding and skin-to-skin contact, warmth, hydration, feeding and lactation, management of respiratory distress, and pain control.” This bill would ensure that born-alive infant survivors receive perinatal palliative care to increase their chance of survival and alleviate their pain.

b. **State Abortion Data Shows that Infants Are Surviving Abortion Procedures**

It is not a myth that there are infants born alive following an abortion procedure, which is why it is necessary for Rhode Island to expand its legal protections of born-alive infant survivors. For example, one CDC report found that over a 12-year period, at least 143 babies survived the abortion procedure before ultimately passing away. The CDC even admits that this number of born-alive

infants is possibly underestimated. 19 Similarly, a study published in Obstetrics & Gynecology found that of the 241 preborn children aborted for having a fetal anomaly between 20 and 24 weeks gestational age, 122 infants survived the procedure before ultimately passing away.20

Eight states voluntarily report abortion information on born-alive infants, including Arizona, Arkansas, Florida, Indiana, Michigan, Minnesota, Oklahoma, and Texas.21 These reports show that thirty-five infants were born alive in Arizona, Florida, Minnesota, and Texas in 2020 and 2021.22 Another eight infants were born alive in Florida in 2022.23 In this regard, infants are surviving attempted abortions, and they are in critical need of medical intervention to increase their chances of survival and to provide comfort care. This bill ensures that infants born alive following an abortion receive medically appropriate and reasonable medical care and treatment. As a result of these protections, the survival rate of born-alive infants will increase, and more infants will receive essential, perinatal palliative care.

III. H 5047 Supplements the Federal BAIPA, Providing Necessary, Commonsense Protection for Born-Alive Infants

Congress enacted BAIPA to clarify that federal law recognizes infants born alive at any stage of development are persons.24 Yet, the law does not ensure that infants will receive life-saving protection and medical intervention if they need it. It is therefore necessary to require an affirmative action by a physician to ensure that an infant born alive after an abortion receives the same level of medical care as any other infant would.

This bill is more comprehensive than the federal BAIPA and fills in its gaps by expanding protections for born-alive infants. First, the bill acknowledges that a born-alive infant survivor is a legal person for all purposes under Rhode Island law and is entitled to the same legal protections as any other person. Under Section 23-99-4, the bill requires that a physician “take all medically appropriate and reasonable steps to preserve the life and health of a born-alive infant.” Any health care provider who intentionally, knowingly, or negligently fails violates Section 23-99-4, would be guilty of a felony. Notably, the bill states that Section 23-99-4 is not to be misconstrued to prevent the infant’s parents “from refusing to give consent to medical treatment or surgical care that is not medically necessary or reasonable.”

21 Questions and Answers on Born-Alive Abortion Survivors, supra note 11.
22 Id.
23 Id.
Currently, Rhode Island has the Care of Babies Born Alive During Attempted Abortions Act, which only criminally penalizes a health care provider “who knowingly and intentional fails to provide reasonable medical care and treatment to an infant born alive in the course of an abortion.” H 5047 will expand legal protections for born-alive infant survivors in Rhode Island, ensuring that a born-alive infant receives immediate medical care that will preserve their life and health, that a born-alive infant is transferred to a hospital in order to receive medically appropriate and reasonable care, and that a born-alive infant is not used for any scientific research or other kind of experimentation. If H 5047 is passed, Rhode Island would join thirty-three other states that have some form of protection for newborns who survive the abortion procedure.25

This bill is also necessary because the federal BAIPA only extends to hospitals operated by the federal government or those which receive federal funding, and the hospital’s employees. It would not require many private or state-operated clinics and hospitals to provide care or medical attention to born-alive infants. However, the ability to have an abortion in Rhode Island does not include the right to commit infanticide, nor justify the denial of basic protections for born, living human infants. H 5047 would create the affirmative duty of healthcare providers to give medically appropriate and reasonable care for the most vulnerable members of Rhode Island’s community.

The bill furthers Rhode Island’s interests to protect living newborns. By providing for civil and criminal penalties for violation of the law, in line with violations of other codes of professional conduct, this bill ensures that infant protections will be properly and consistently enforced, making these safeguards more than just a rule on paper.

IV. Conclusion

For these reasons, I strongly encourage the Members of this Committee to support H 5047 and continue to uphold Rhode Island’s duty to protect the lives of all its citizens, no matter the circumstances in which they were born.
